

Model GHV2000PS Handi-Vol

The Handi-Vol 2000PS features a compact "sample anywhere" design for determining airborne particulate levels in isolated areas. It is ideally suited for intermitted verification of industrial hygiene standards and suspected pollution sources. Utilizing 4" diameter paper the unit traps particles to .03 Microns. The filter holder (GFH2104) is closely coupled to the blower motor to minimize overhang and provide maximum protection to the sample taken. The "swing away" bolts on the filter holder facilitate paper replacement and eliminate damage to the filter media while clamping. The Handi-Vol 2000P is equipped with a variable orifice meter for measuring air flow rate. The unit is assembled ready for operation with 4" diameter filter holder integral handle, rubber feet, on/off switch, fuse holder and polarized electrical power cord. The Model GHV2000PS comes complete with Model G10768 Tripod Stand for complete portability.
